

Increase in Cancer Risk

**Coronary Heart Disease**  
*Testing could save a life*

Coronary heart disease is typically caused by blockage and narrowing of arteries. Inflammation of the blood vessels generated by too much abdominal fat can raise the likelihood of developing this disease. People who are excessively overweight have a dramatically increased risk of developing coronary heart disease. Getting all the appropriate medical tests can save your life.

*We are your team of professionals committed to helping you achieve your best life. Now is the time to make your commitment and join the team.*

*Coronary artery with atherosclerotic plaque buildup, diminishing blood flow to the heart.*
